DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 11-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recited terms “track-like” and “plate-like” render the claims indefinite since it is unclear what particular structures or shapes would such limitations.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 11-13 and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Loktev et al (US 6,353,707).

Loktev shows a heating assembly with a flexible plate-like carrier (73), at least one heating element made of a thick film track-like electrical resistor (70), a plate-like support member made (75) of an insulating material, and an insulating layer (74) provided to the carrier layer by which the heating element is connected thereto, the support member engaging with the carrier at positions where there is no electrical resistor.

5. Claims 11-14 and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Sakai et al (US 4,574,186).

Sakai shows a heating assembly with a plate-like carrier made of plastics which inherently possesses some flexible characteristics, the carrier having raised and lowered parts, a thick-film track like resistor, a plate-like support member of an insulating material, an insulator layer provided to the carrier layer, and the support member engaging with the carrier layer where there in electrical resistor.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

7. Claims 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burdon et al (US 6,572,830).

Burdon shows the heating assembly claimed including a plate-like carrier formed by two carrier parts placed against each other defining a passage for a medium for heating, a heating element formed in a thick-film track like resistor and arranged on the carrier layer, a support member for engaging on the carrier layer. But, Burdon does not explicitly show that the carrier layer is flexible.

While Burdon does not show that the carrier is flexible, Burdon shows that it is known that plastic material is used for the carrier and since a ceramic material can be flexible to a certain extent, it would have been obvious to one of ordinary skill in the art to provide the carrier

made of any suitable materials, including flexible material, as long as a suitable protection can be provided for the heated medium.
